

# Membership

# Our **mission**

The Rails Foundation was established to support and grow the Rails community alongside the Ruby on Rails framework.

Our mission is to share the joy and productivity of working with Rails by improving Rails **documentation**, creating free resources for **education**, promoting the framework through **marketing** efforts, and hosting first-class **events** that unite the community.

By supporting the Rails Foundation, our members contribute to this growth, helping the ecosystem evolve and remain an attractive choice for new developers for many years to come.

# Our members

New members would be joining some of the most important and established companies involved in the Rails ecosystem.

## Core members:

[Cookpad](#), [Doximity](#), [Fleetio](#), [GitHub](#), [Intercom](#), [Procore](#), [Shopify](#), [1Password](#),  
and [37signals](#)

## Contributing members:

[AppSignal](#), [BigBinary](#), [Cedarcodes](#), [Clio](#), [Gusto](#), [makandra](#), [Planet Argon](#),  
[Renuo](#), and [TableCheck](#)

# Why support **our mission**

This is what our members have to say.

“Without Rails, we wouldn’t be able to build AppSignal the way we do, leveraging the power of the framework and its community. By joining the Rails Foundation, **we want to play our part in helping new and existing developers discover, learn, and enjoy working with the framework that made us.**”

**Roy Tomeij**

Co-Founder of Contributing member **AppSignal**

“At Doximity, we’re dedicated to helping physicians save time and deliver better patient care. For 15 years, Ruby on Rails has powered our mission, enabling us to build the largest network of healthcare professionals and streamline healthcare tools. Supporting the Rails Foundation **lets us invest in this vibrant ecosystem, ensuring Rails continues to evolve and empower innovation** in healthcare and beyond.”

**Bruno Miranda**

SVP, Engineering of Core member **Doximity**

“Rails has been a reliable platform to grow our business, both in terms of continually shipping product enhancements to customers, and hiring and onboarding new developers. 11 years into our Rails journey **we continue to double-down on our investment in the framework**, and we’re thrilled to join the Rails Foundation as our latest step.”

**Johnny Shields**

Founder & CTO of Contributing member **TableCheck**

“We are Ruby on Rails lovers. It has helped our company grow and lets us enjoy what we do every day. When we heard about the Rails Foundation, we knew we wanted to get involved. We believe the Rails Foundation will **help the Rails ecosystem evolve and stay strong for the years to come**. We are glad to be part of it!”

**Sebastian Suttner**

Co-Founder of Contributing member **Cedarcodes**

“**We want to contribute to the longevity of Rails**. We come from a small agency’s point of view and want to influence the formal and cultural groundwork as a small player. We also feel strongly about **education**. Our vision? To see Ruby on Rails in universities.”

**Alessandro Rodi**

Software Engineer & Partner at Contributing member **Renuo**

“Joining the Rails Foundation is a huge milestone for us and shows that **we are fully behind Ruby on Rails**. We are proud to be part of this community and we are determined to do our part to further develop and strengthen the framework.”

**Thomas Eisenbarth**

CEO and Founder of Contributing member **makandra**

“At BigBinary, we all love working with Ruby on Rails, and find it incredibly productive. Without it, it wouldn’t be possible for us to build neeto, where we are building 20+ products simultaneously. We are thrilled to be part of the Rails Foundation. **We believe Rails has a great future ahead** and we want to do our bit to make that a reality.”

**Neeraj Singh**

Founder & CEO of Contributing member **BigBinary**

“Our delightful clients benefit from the contributions of the Ruby on Rails community as it enables small teams to achieve big goals. After learning about the Rails Foundation’s goals and upcoming plans, we asked how we could join the mission. This investment is less an attempt to plant new seeds but rather **to help improve the maintainability of an already flourishing garden.**”

**Robby Russell**

CEO of Contributing member **Planet Argon**

Here is what **we've been up to**

# Documentation

The Rails Guides are a great community resource, but Rails is evolving and so too should the documentation.

As the first touchpoint for newcomers and an important source of information for experienced devs, both the content and design must be up-to-date, fresh, and inviting.

The Rails Foundation invests in writers and UX designers to make the documentation more **beginner-friendly**, **comprehensive**, and aligned with **Rails conventions**.

# Documentation

[Documentation update: Work has begun](#)  
[Rails Guides get a facelift](#)

[Merge PRs from the Documentation project](#)  
[Introducing the new Docs landing page](#)

Below: Guides Before & After

The screenshot shows the old Rails Guides landing page for 'Active Record Basics'. The page has a dark red header with the Rails logo and navigation links. The main content area is light blue and contains a 'Chapters' list on the right and a main text area on the left. The text area includes a '1 What is Active Record?' section with a yellow checkmark icon and a '2. Convention over Configuration in Active Record' section. The overall design is dated and cluttered.

The screenshot shows the new Rails Docs landing page. It features a clean, modern design with a white background and a dark red header. The header includes navigation links for 'Source', 'Docs', 'Community', 'News', 'Events', 'Jobs', 'Merch', and 'Foundation'. The main content area is titled 'Everything you need to get building.' and is organized into two rows of cards. The first row is titled 'Get Started' and includes cards for 'Download Rails', 'Follow a tutorial', and 'Read the guides'. The second row is titled 'Dive Deeper' and includes cards for 'The API Documentation', 'Join the conversation', and 'Contribute to Rails'. The overall design is clean, professional, and easy to navigate.

Above: New Docs landing page

# Education

The Rails Foundation is committed to creating free resources so that anyone can learn Rails, whether they are brand new to coding or from another framework and curious about Rails.

This includes a brand new [Getting Started](#) tutorial that covers the latest Rails 8 frameworks and features, ensuring that anyone who wishes to learn Rails will have free access to **the most up-to-date, hands-on tutorial** and can learn Rails by building an e-commerce app themselves.

We are also investing in video content, such as the [Rails 8 Unpacked](#) series, a collaboration with the YouTube channel Typecraft to help viewers learn more about Rails' new features.

# Marketing

The Rails Foundation leads a range of marketing initiatives to promote Rails and the Rails community - **branding, social media, video content, case studies, blogs, the Rails Luminary awards**, and more.

These efforts are essential for attracting new developers, and keeping the community engaged and growing.

This work also helps us show the world how **Rails is a strong choice** for web development - because it is stable, scalable, actively maintained, and a joy to use (among many other reasons!).

**Ruby on Rails** @rails

Rails 7.1 has a new 'log\_file\_size' config to keep your logs from growing out of control. It defines the maximum size of your log file in bytes. The default log file size in the development and test environments is 100 MiB, but is unlimited in all other environments. #RailsTip

```
# development.rb
Rails.application.configure do
  # Here, we set our development log file
  # size to a maximum of 500 megabytes.
  # The log will rotate upon reaching this
  # size
  config.log_file_size = 500.megabytes
end
```

## Fast, Flexible, and Scalable: How Rails Powers Doximity's Healthcare Platform.

**Doximity set out to help doctors save time and focus on what matters most: their patients.** Over the past 15 years, they've built tools for communication, workflow, and telehealth that are now trusted by over two million healthcare professionals, including 80% of U.S. doctors. These tools make a real difference in the lives of both physicians and patients.

But like many startups, Doximity began with a small team and a big challenge: how to build something fast enough to find its footing in the market.

"We set out to build the largest professional network of healthcare professionals in the US. Back then, we weren't sure which features would resonate the most with physicians - we just knew we had to build fast and listen to their needs."

— Bruno Miranda, SVP Engineering

They chose to build on Rails because its speed, flexibility, and developer-friendly features were useful for Doximity's small team. The expressive syntax let them write clean, maintainable code quickly, while Rails' built-in conventions and rich ecosystem helped them launch features, gather feedback, and iterate rapidly.

### Rapid Prototyping

In Doximity's early days, Rails' focus on productivity allowed their developers to work quickly and efficiently. Rails allowed the Doximity team to prototype new features, test ideas, and respond to user feedback. Even with a small team, Rails' built-in testing tools made it easier to ensure code quality without the need for a dedicated QA team.

The Doximity team also leans into Rails' "convention over configuration" philosophy, and Rails' familiar Model-View-Controller (MVC) structure makes onboarding new engineers as smooth as possible. With over 150 developers across a wide array of teams pushing code to production 60+ times a day, this consistency ensures systems stay easy to understand and scale. Developers can jump in, make an impact, and keep moving forward.

The ability to experiment and iterate quickly paid off. What started as an initial 2010 Rails prototype app grew into the leading digital platform for U.S. medical professionals.

### Scaling Fast Under Pressure

When the pandemic hit in early 2020, doctors and healthcare professionals were forced to shift to remote care solutions.

One of Doximity's standout patient-facing tools is **Doximity Dialer**, which lets doctors call or text patients from their own devices without exposing personal phone numbers. Patients receive an SMS link from their doctor and, upon clicking, are instantly connected - no native app installation required.

Dialer's use skyrocketed, but overnight, doctors needed an additional secure telemedicine video application that would allow doctors and patients to meet virtually, all while Dialer handled millions of citizens' calls.

"Between April 2020 and March 2021, Doximity supported over **63 million** telehealth visits."

# Events

The Rails Foundation organizes **Rails World**, an annual conference that gathers 700 to 1,000 Rails developers from around the world to share knowledge, build relationships, and unite the community.

Our goal is for Rails World to be one of the best tech conferences in our industry - for attendees, as well as for speakers and sponsors.

Both editions (Amsterdam 2023 and Toronto 2024) sold out quickly, proving that the desire for this community to gather is really strong.

<https://rubyonrails.org/world/>

# Here is what is **in the works**

- New guides
- API docs refresh
- More case studies highlighting companies built on Rails
- Expanded tutorials - learn Rails by adding features to the demo app
- More video series highlighting new features in Rails
- Rails World 2025, 2026, 2027 and beyond in cities around the world
- Rails at Scale summit bringing together larger companies dealing with unique challenges

We have so much planned. With your support, we can do much more!

# Membership levels

The Rails Foundation has two membership levels: **Core** and **Contributing**.

# Core

The Rails Foundation was launched in 2022 with the support of 8 Core founding members. Each contributes \$75,000 per year to the support of the foundation's mission.

These Core members are each represented by one employee on the foundation's board, which is then chaired by the creator of Ruby on Rails, David Heinemeier Hansson. The board meets quarterly to decide on the strategic direction of the foundation.

In November 2024, the board unanimously voted to expand the number of Core members. Interested parties can submit a request to the Rails Foundation.

# Contributing

The second level of membership is the Contributing member. Contributing members contribute \$25,000 per year to the foundation's mission.

One representative from each Contributing member company is given access to the Core & Contributing member Basecamp project where we share news about current and upcoming initiatives.

Contributing members do not have a seat on the board or voting privileges, but they do have the opportunity to add discussion points to the quarterly board meeting.

The foundation is now accepting new Contributing members.

# Benefits

In addition to supporting the community, Contributing members also benefit from membership. Here are just some of the ways:

- Use of the Rails logo on member's website to show the community your support
- Name & logo on the Ruby on Rails website (100k unique visitors a month)
  - Coming soon: a dedicated profile page on the website per member
- Announcement on the Rails blog & social media
- Access to the private Campfire instance for Core & Contributing Engineering teams
- Unlimited free Featured ads on the Rails Job Board
- Participation in future Foundation initiatives (events, case studies, video series, etc)
  - Members have complimentary and discounted tickets to each Rails World, and a discount on sponsorships.
  - Members will be among the first companies we highlight in the case studies (written and video) on the Rails website.
  - Invitation to private events during Rails World, such as venue tours, cocktail hours, dinners, panel discussions, and dinners.
  - Core and Contributing members also host the annual Rails World Speaker Dinner.

If your company would like to support and shape the future of Rails through this important community work, we invite you to apply by writing to:

[foundation@rubyonrails.org](mailto:foundation@rubyonrails.org)

The foundation is a non-profit 501(c)6 foundation incorporated in the US.

# The **Rails** trademark
