Katelyn Ferreira, Southcoast Health

Katelyn Ferreira is the Health Equity Program Manager at Southcoast Health, where she works with care teams and communities to address disparities and promote health access. Katelyn also serves as the co-chair of More Pride Southcoast, an LGBTQ+ Employee Resource Group. Her career has included managing research teams as well as providing direct service to individuals and families impacted by incarceration and involvement with child welfare systems. She is passionate about bridging science, policy, and practice. Katelyn lives in Pawtucket, Rhode Island. She enjoys traveling, camping, crafting, and reading, and is happiest near the ocean.

Katelyn received an MPH from the Harvard T.H. Chan School of Public Health, where she focused on Social Drivers of Health and Disparities and completed a concentration in Women, Gender, and Health. Prior to that, she earned a Bachelor of Arts in Psychology from the University of Massachusetts Amherst. Katelyn is also a proud alumna of the Fulbright Program, through which she spent a year living and working in Malaysian Borneo.

More than medicine.

Intro to Southcoast Health

Community-based health system in Massachusetts and Rhode Island

- + Southcoast Hospitals Group (3 hospitals)
- + Southcoast Physicians Group
 - + primary care
 - + specialty care
 - + cancer centers
 - + urgent care
- + Southcoast Health at Home
- + Acute inpatient rehabilitation

Health Care
Equity Certified

Health Equity at Southcoast Health

We advance health equity at Southcoast Health by:

1. **Asking** our patients about their race, ethnicity, language, disability, sexual orientation, and gender identity (RELD/SOGI) information.
2. **Analyzing** that information to identify disparities.
3. **Acting** to address health disparities through programs like Southcoast Cares About My Diabetes.
4. **Tailoring** care to meet patient needs (e.g., interpreter services, disability-related accommodations).
5. **Screening** patients for Health-Related Social Needs and collaborating with community partners to address them.
6. **Ensuring** that our teams reflect the diversity of our communities, and that we understand how our patients' lives and circumstances impact their care.

We ask because we care.

We ask about race, ethnicity, language, disability (RELD) and sexual orientation and gender identity (SOGI). This is part of our commitment to health equity. RELD/ SOGI information helps us to deliver the best care and to welcome and support all our patients.

[Learn More!](#)

Preguntamos porque nos importa.

Preguntamos sobre raza, etnia, idioma, discapacidad (RELD, por su sigla en inglés) y orientación sexual e identidad de género (SOGI, por su sigla en inglés). Esto forma parte de nuestro compromiso con la equidad en salud. La información sobre RELD/SOGI nos ayuda a prestar la mejor atención y a acoger y apoyar a todos nuestros pacientes.

Perguntamos porque nos importamos.

Perguntamos sobre raça, etnicidade, linguagem, deficiência (RELD), orientação sexual e identidade de gênero (SOGI). Isso faz parte do nosso compromisso com a equidade de saúde. A informação RELD/ SOGI ajuda-nos a entregar o melhor cuidado e a acolher e apoiar todos os nossos pacientes.

RELD SOGI Data Collection at Southcoast Health

- + We have been collecting **race** and **ethnicity** data historically (and made changes in August 2023).
- + We began collecting **sexual orientation** and **gender identity** data since August 2022, and we made minor changes in July 2024.
- + We began collecting self-reported **disability** data in December 2023.
- + Many groups of personnel across the system—e.g., registration, MAs, PARs, service center, providers—are currently collecting this data.
 - + Also available in **MyChart**

Southcoast Cares About My Diabetes: Project Overview

Grant info

- Participation in **BCBSMA/IHI's** “Equity Action Community” → awarded \$1.7M to address disparities
- **Period:** January 2023 – June 2024
- **Project team:** Southcoast staff from a variety of disciplines, including CHWs, nurses, pharmacists, primary care, endocrinology
- **Partnerships:** Boys & Girls Club, YMCA South Coast

Aims

- Reduce **disparities** in diabetes management and outcomes for our most at risk populations
- Provide a **holistic approach to diabetes management**
- Improve culturally competent race, ethnicity, and language (**REaL**) data collection in Epic

Southcoast Cares About My Diabetes: The Problem

A1c control among patients with diabetes

Poor control = A1c ≥ 9 or untested

■ A1c control
■ A1c poor control

Hispanic or Latino/a/x/e
 Black/African American (non-Hispanic)
 White (non-Hispanic)

A1c testing among patients with diabetes

Patients +/- A1c test in last 12 mos

■ Tested
■ Untested

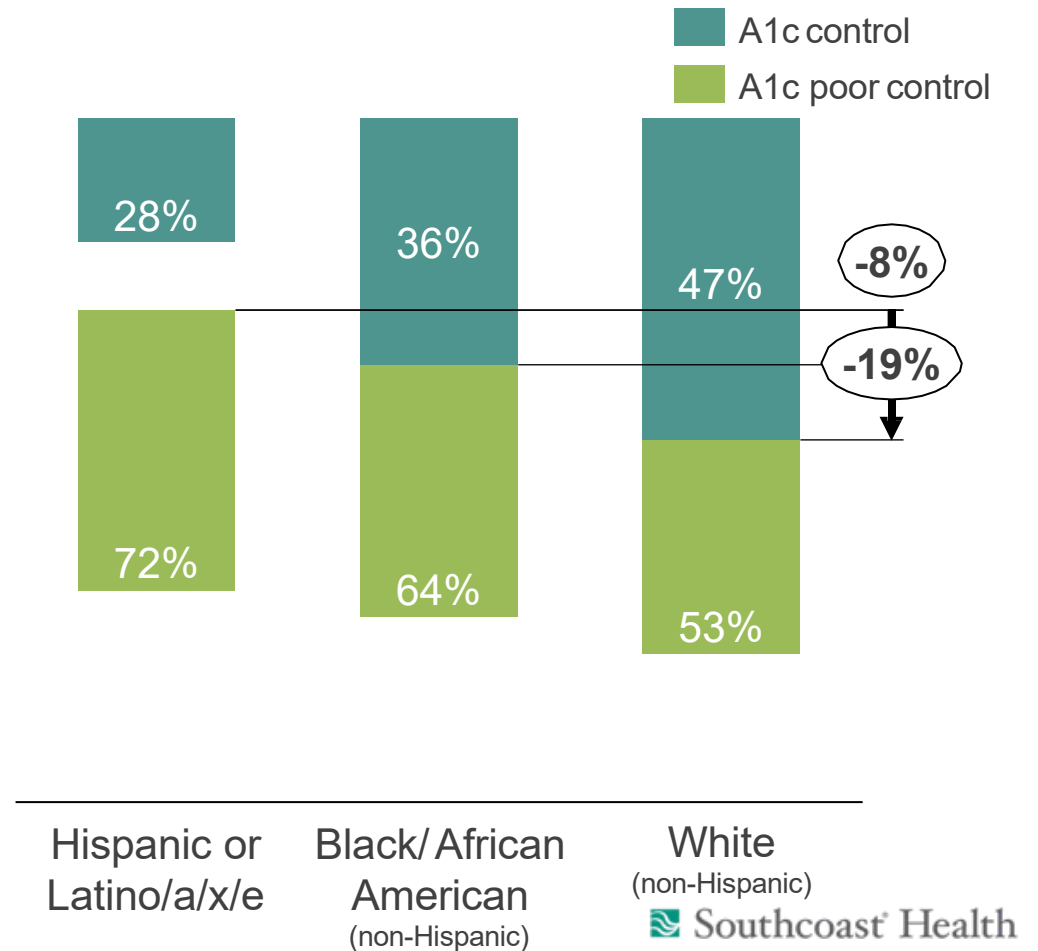

Hispanic or Latino/a/x/e
 Black/African American (non-Hispanic)
 White (non-Hispanic)

Lessons in Displaying and Sharing Stratified Data

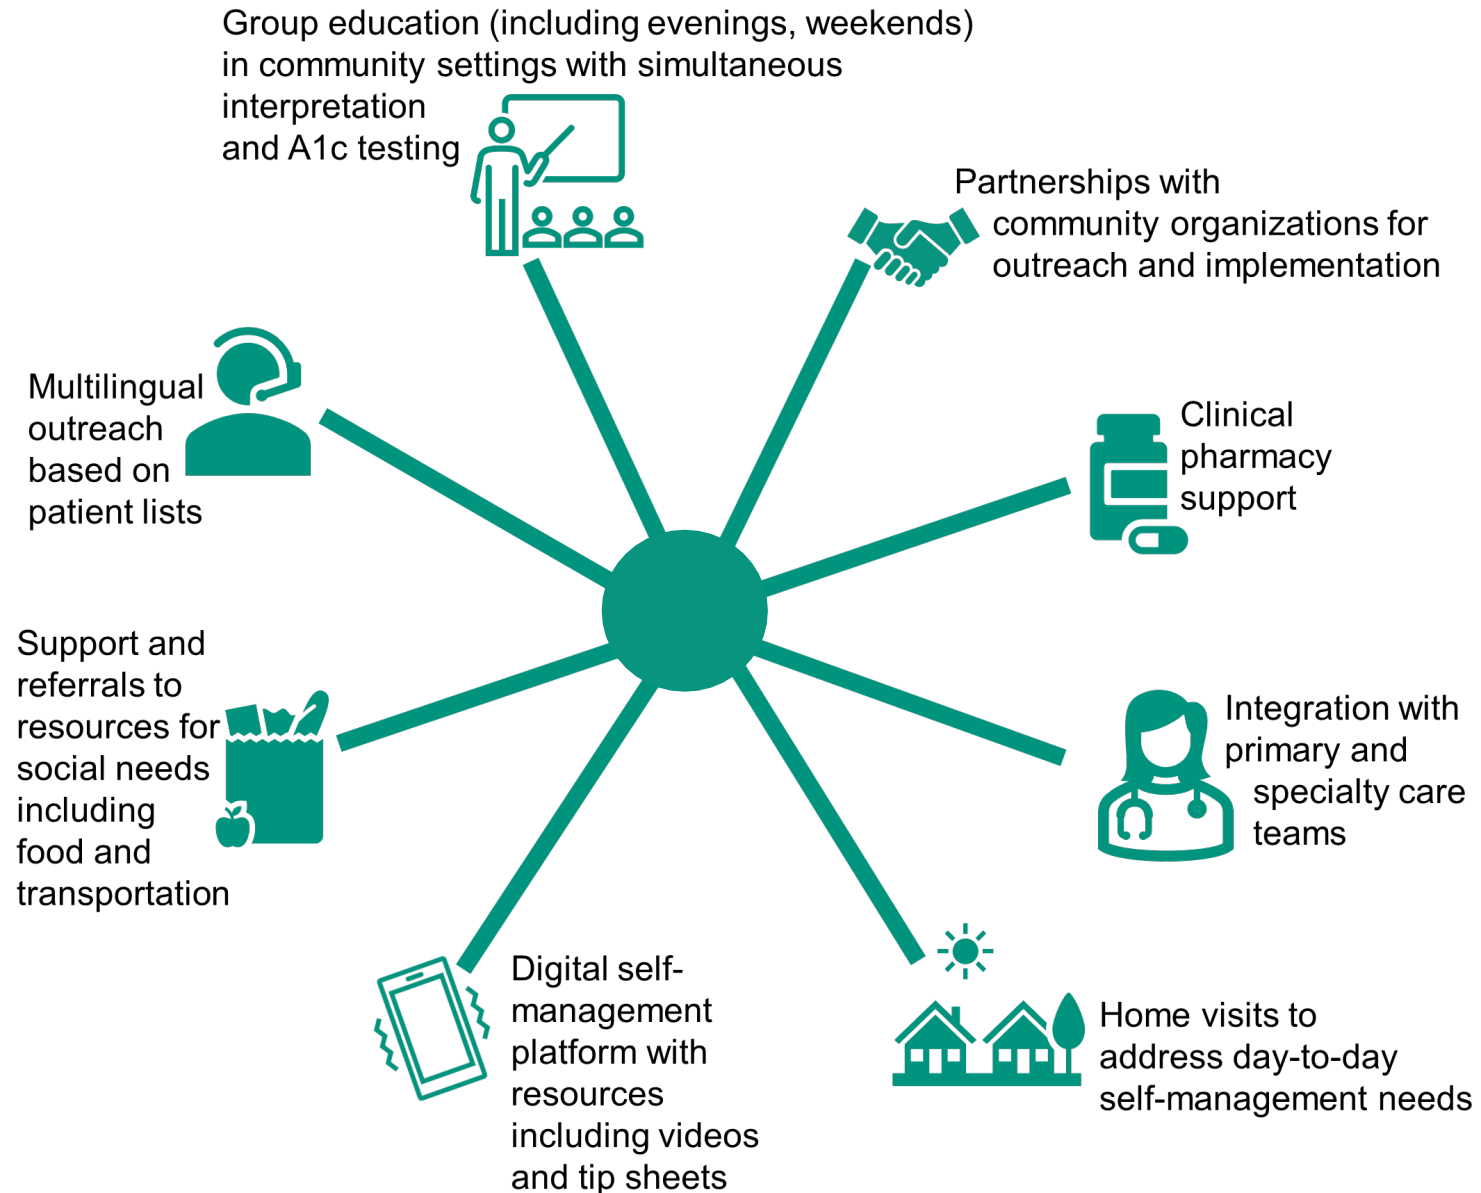

A1c poor control among patients with diabetes
Epic diabetes registry

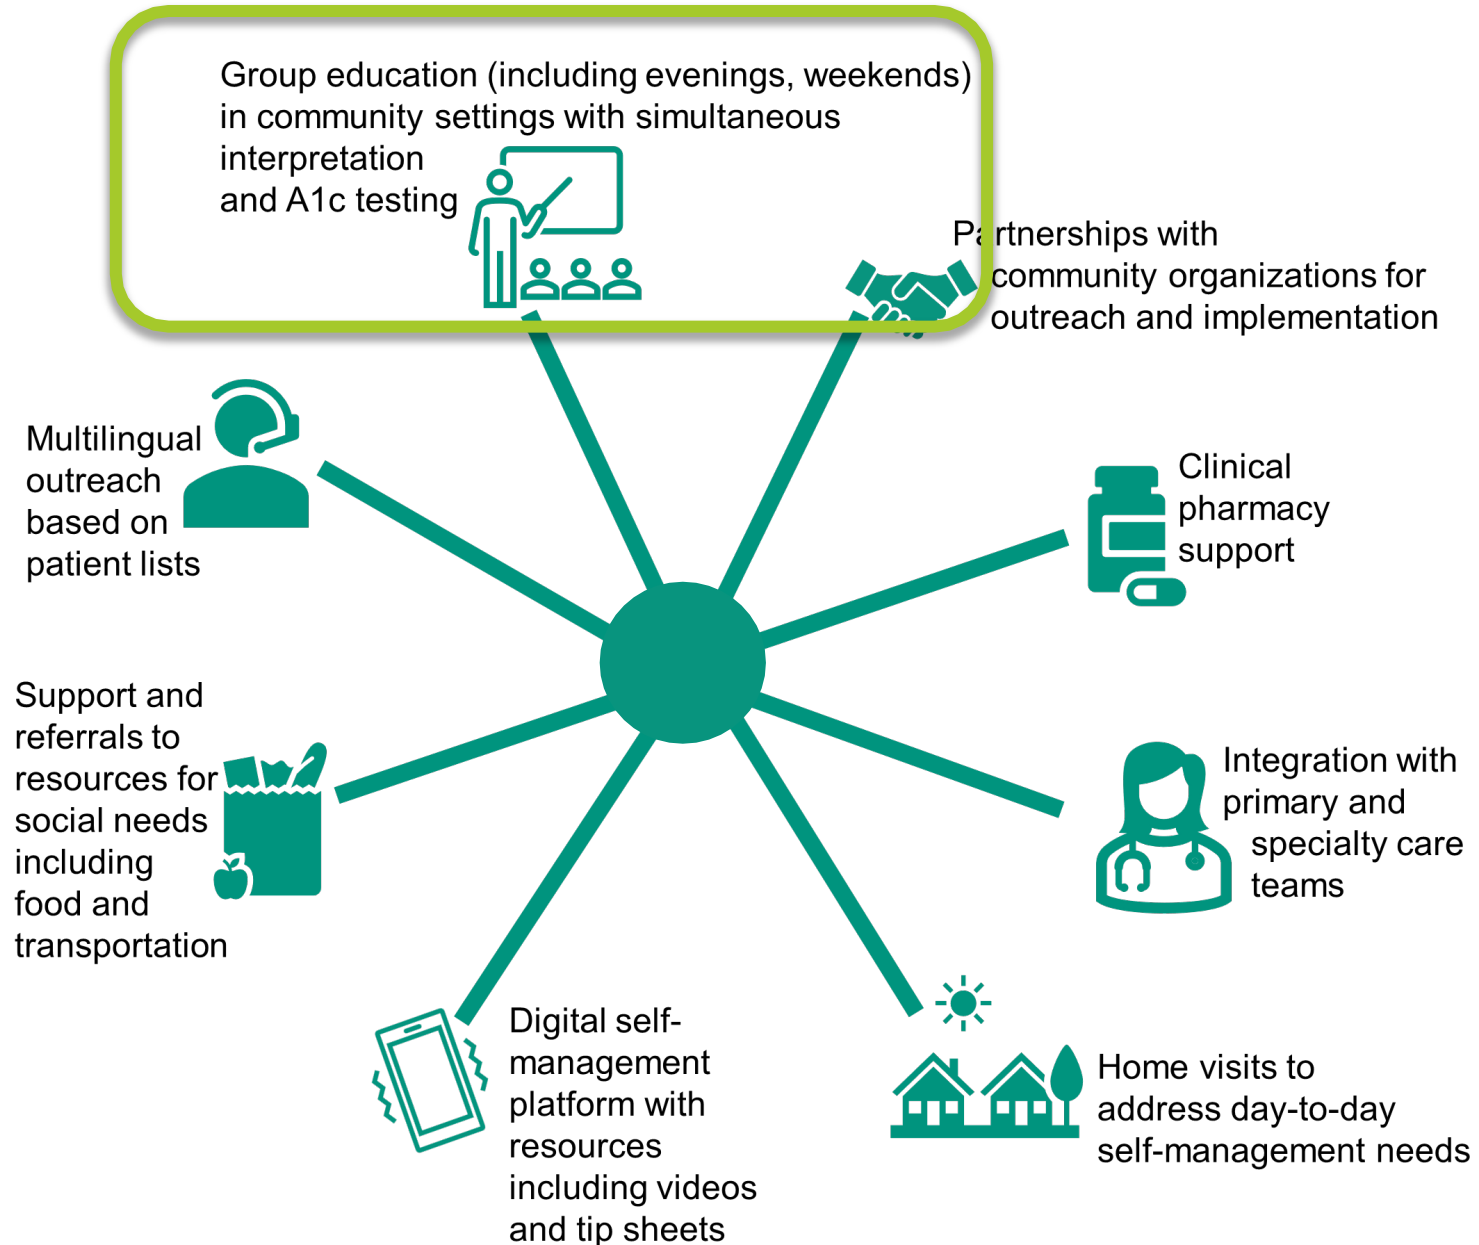

A1c control among patients with diabetes

Intervention Components

Intervention Components

Intervention Components

Group education (including evenings, weekends) in community settings with simultaneous interpretation and A1c testing

Partnerships with community organizations for outreach and implementation

Diabetes Education Groups

Roles:

- + CDCES
- + Pharmacy
- + Community Health & Wellness

Logistics:

- In locations with highest numbers of patients in groups experiencing disparities
- Patient preference for both location and time of day (Weekend mornings, weekday evenings)
- Transportation support

including videos and tip sheets

Clinical pharmacy

QUAL É A MINHA A1C?

A A1C é uma análise ao sangue que se faz no consultório do médico ou num centro de saúde. Mostra:

- O seu nível médio de açúcar no sangue nos últimos 3 meses
- O seu risco (probabilidade) de ter outros problemas de saúde devido à diabetes

Por que preciso dela?

Os resultados da análise A1C são a melhor forma de saber se o açúcar no sangue está bem controlado ao longo do tempo.

Qual é o valor de A1C mais adequado para mim?

Cada pessoa é diferente. O objetivo ou meta de A1C mais adequado para si será decidido por si e pelo seu médico ou educador em diabetes.

Faça o seu MELHOR, faça a ANÁLISE!

The tip sheet is titled "QUICK TIPS TRAVELING WITH TYPE 2 DIABETES" and includes sections for packing essentials, airport security rules, and health insurance. It features an image of a travel kit.

QUICK TIPS
TRAVELING WITH TYPE 2 DIABETES

Prepare for stress-free travel with these essential tips for managing type 2 diabetes on the go.

PACKING ESSENTIALS:

- Insulin (always pack extra)
- Diabetes oral medications and non-insulin injectable
- Continuous glucose monitor (CGM) sensors
- Glucometer, test strips, lancets, and extra battery
- Glucagon and treatment for hypoglycemia (glucose tablets)
- Alcohol wipes
- Small sharps container
- Pen needles, syringes, infusion sets, cartridges
- Charging cable or batteries for insulin pump or CGM (translators do not charge CGM)
- Small cooler for medications
- Snacks such as protein bars, juice box, and trail mix
- First aid kit
- Letter from the health care provider stating that you have diabetes and need to carry medical supplies

KNOW AIRPORT SECURITY RULES:

- Familiarize yourself with TSA's list of allowable medical devices.
- Bring all medications and insulin on board with a letter from your healthcare provider.
- Avoid full-body scanners if wearing a continuous glucose monitor or insulin pump. Request a hand search instead.
- For international travel, understand airport rules and regulations.

STAY INFORMED, STAY PREPARED:

By following these tips, you can manage your diabetes safely and effectively while traveling.

English, Spanish, & Portuguese

Project Outcomes

805 patients received outreach

147 patients were engaged

“Very informative concerning label reading and way the pancreas operates.”

“I needed to see that Diabetes will win unless I continue to do better. It is necessary to hear other folks’ stories... Teaching was done honestly with compassion. I want to do better because I start to feel better... The notebook about Diabetes is so easy to understand. Making it very clear.”

% of participants with A1c <9 (vs ≥9 or untested) among engaged participants

The % of A1C<9 increased among participants overall and in each subgroup. The greatest % increase was among Hispanic or Latino/a/x/e participants.

Dissemination

We have prioritized peer-to-peer sharing of this work through BCBSMA's Equity Action Community and other venues (e.g., IHI Forum Dec 9-11).

Southcoast Cares About My Diabetes: Our Journey to Improve Equity in Diabetes Management

Katelyn B. Ferreira, MPH; Lindsay Dowd, RN, CCM; Melissa Appleton, MBA, PMP, PMI-ACP; Amy Anderson, DO; Christine Cernak, RN, MPH; Casey Souza, PharmD; Robert Hiipakka, BS; Kenneth Eugenio, PharmD, MHA; Lisa Alves, RN; Kasey C. L'Heureux, PharmD, BCPS; Seanna McRae-Baker, MHM, BEC, LPN; Alison LeBer, MHA; Jason Santos, MBA; Maria DaCosta; Alexis K. Cottam, MBA, LSS MBB; Lori Choquette; Executive Sponsors: Lauren Melby-Nieder, MBA, MPP & Dani Hackner, MD, MBA

Background

We identified inequities in diabetes management and disparities in outcomes among our patient population. Among patients with type 2 diabetes, Black/ African American patients and Hispanic/ Latino/a/x/e patients were less likely to receive an A1c test in the last 12 months than White patients. Adverse outcomes of Hemoglobin A1c >9 were more likely among Black/ African American patients and Hispanic/ Latino/a/x/e patients than White patients.

Opportunity

A1c testing among patients with diabetes
Patients -/ + A1c test in last 12 mos

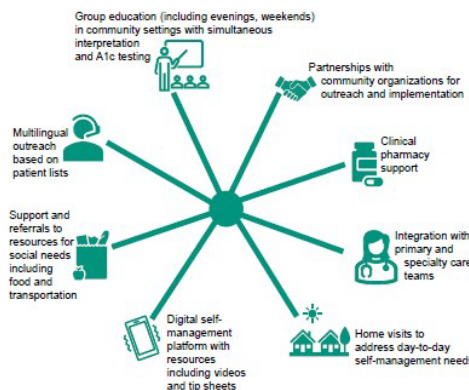

A1c control among patients with diabetes
Poor control = A1c ≥9 or untested

Aims

- + Reduce inequities in management of diabetes
- + Reduce disparities in diabetes outcomes
- + Provide a holistic approach to diabetes management
- + Improve collection of race, ethnicity, and language (ReAL) data to enable robust measurement of disparities

Interventions

Results

805 patients received outreach
147 patients were engaged

% of participants with A1c <9 (vs ≥9 or untested) among engaged participants

The % of A1c <9 increased among participants overall and in each subgroup. The greatest % increase was among Hispanic or Latino/a/x/e participants.

Southcoast Health

Patient Feedback

"Very informative concerning label reading and way the pancreas operates."

"I needed to see that Diabetes will win unless I continue to do better. It is necessary to hear other folks' stories... Teaching was done honestly with compassion. I want to do better because I start to feel better... The notebook about Diabetes is so easy to understand. Making it very clear."

Lessons Learned

- This project provided an example of successful disparity reduction via multi-pronged collaboration aimed at driving down inequities in care. Key takeaways included:
 - the significance of intervention in community settings and at patient-preferred times to improve access
 - the benefits of peer-to-peer support in chronic disease management to reduce barriers and enhance evidence-based approaches to engagement / empowerment
 - the necessity of employing culturally and linguistically diverse material in digital self-management platforms

Funding

Funding for this project was provided through the Equity Action Community (EAC) of Blue Cross Blue Shield of Massachusetts (BCBSMA) with support from the Institute for Healthcare Improvement (IHI).

Ongoing work and Continued Impact

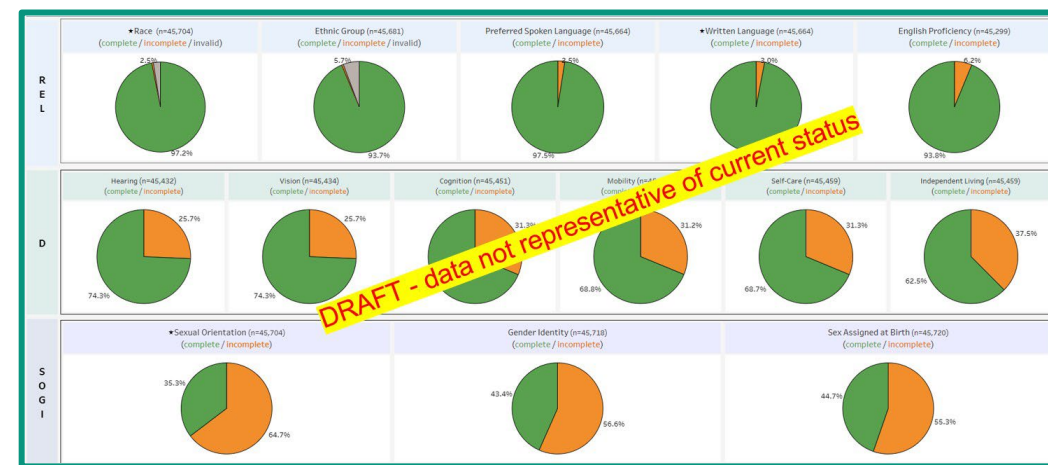

+ Incorporating lessons learned into ongoing operations

+ Integrating newly created, community-tailored Care Companion content

+ Spread and standardization across healthcare system

+ Continuous improvement of RELD SOGI data collection

+ Monitoring performance across patient population
Populations: patients in primary care, patients in value-based contracts

Ongoing work and Continued Impact

Lessons Learned

This project represented a new frontier in equity-focused clinical quality improvement intervention for Southcoast.

Our system will carry forward learnings regarding:

- data / dashboarding & stratification
- cross-team collaboration, cross-training, and co-education
- patient-centered intervention design

+ APPENDIX

Resource Hub

southcoast.sharepoint.com/sites/HealthEquity

Health Equity at Southcoast Health

^ Key Definitions

What is health equity? Health equity is achieved when everyone can attain their **full potential** for health and well-being. (WHO)

What is a health disparity? Health disparities are preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health that are experienced by socially disadvantaged populations (CDC). A **healthcare disparity** is a difference between population groups in the way they access, experience, and receive health care. Factors that influence health care disparities include social, economic, environmental, and other disadvantages. (NIH)

What is a social driver of health? These are the nonmedical factors that influence health outcomes. They are the conditions in which people are born, grow, work, live, and age. (CDC) Social determinants of health (SDoH) and Health-Related Social Needs (HRSN) are similar terms that are sometimes used interchangeably.

What is RELDSOGI data? RELDSOGI (sometimes stylized RELD/SOGI or RELD and SOGI) stands for Race, Ethnicity, Language, Disability, Sexual Orientation and Gender Identity. You might also see the abbreviation REaL, which stands for Race, Ethnicity, and Language (a subset of RELDSOGI data).

Pre/Post Best Practice Assessment Summary

Pre and Post Best Practice Assessment Summary

[View Pre Post Assessment Survey Monkey PDF](#)

Best Practice Pre/Post Trends

Best Practice Assessment
Pre and Post Scores Comparison

Best Practices with 100% adoption

- Patients are allowed to use multiple selections
- Processes and systems support patients who decline
- Ability to ensure patient privacy
- Patient education is provided
- Staff is trained on internal processes
- Staff has time needed
- Staff education is provided
- Clear accountability has been established
- Regular measurement of completeness and accuracy
- EHR is configured to support race/ethnicity mapping and eliminate free text input

Opportunities for Continued Improvement

- Collect data at a more granular level based on local community population needs with proactive mapping to aggregated standards
- EMR prompts staff to update demographic data at predefined frequency
- Use other technology to capture demographic data from patients, for example pre-registration on a portal, kiosk, or texting system

Best Practice Discussion

- What did your practice learn from the best practice assessment?
- What did you find valuable about the process?
