

# The Integrated Telematics World

Paul Weiss  
Business Development Manager, Teletrac  
Navman

# Teletrac Navman & SmartJobs; An Introduction

- Transtech, a division of Teletrac Navman, offers a fully integrated and customisable mobile job dispatch and execution solution.
  - Highly specialised and customised workflow solution if required.
- Why Teletrac Navman?
  - To signal the strength and respect that both CMS Transport Systems & Teletrac Navman are showing for a strong combined solution, where each offer their respective strengths in a single combined end to end solution set.
- Beyond mobile job execution
  - Potential for a highly integrated complete TMS/Telematics solution to be achieved.

# Issues confronting transport operations

- Is the technology world for the driver just about job execution ?
  - Can my customers have controlled access to their deliveries?
  - How do I manage my devices? How many devices are required?
  - How do I know who is driving what vehicle? Where is the security?
- What is driver compliance and where does driver compliance fit in?
  - Have you taken sufficient actions under the Chain of Responsibility?
  - How do I and my drivers comply with regulated compliance (IAP, road based user charges)?
- How does my system know about fatigue?
  - About driver hours worked and rested?
- How can I keep track of fuel usage?
  - Where can I claim fuel tax credits?

# A New Level of Integration Beyond Mobility

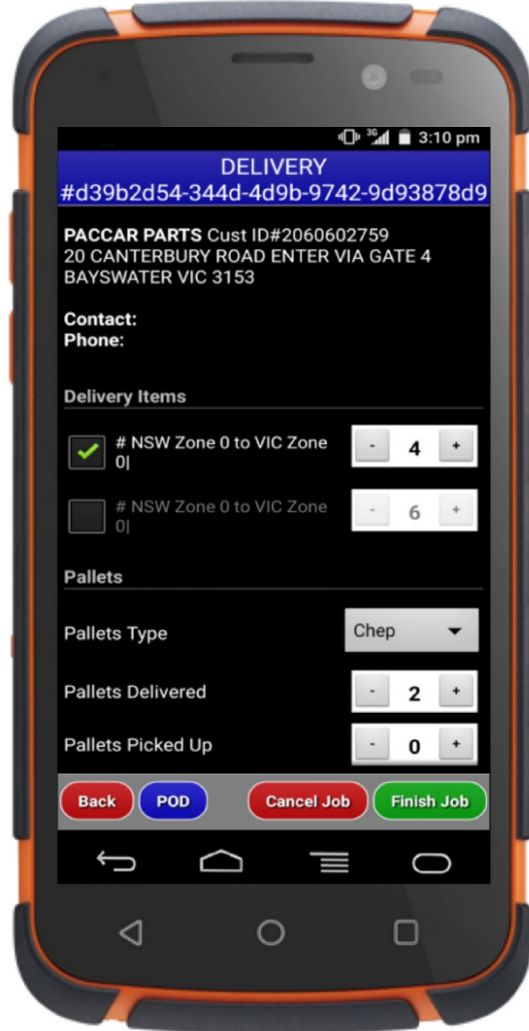

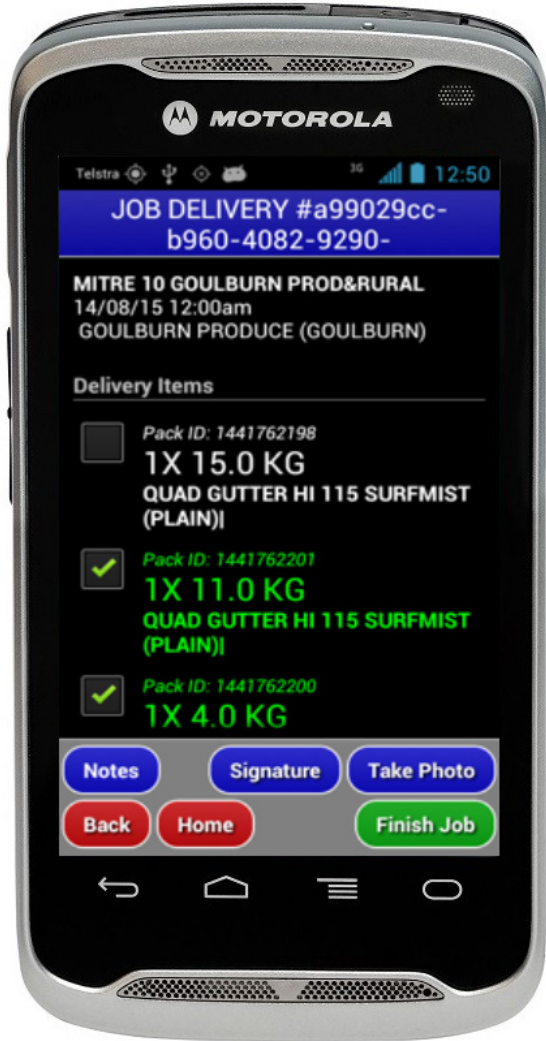

- Job manifesting right down to item level
  - Includes barcode scanning, Proof of Delivery, capture and delivery into F2020.
  - Job management as opposed to vehicle tracking.
- Vehicle Maintenance elements
  - Actual fuel usage, schedule event triggers, pre-trip triggers into maintenance.
- Driver Fatigue and Payroll
  - Hours worked, breaks taken, jobs completed
- Driver job dispatch Scheduling based on driver availability based on fatigue status.
- On-Board Scale data availability for F2020.
- Trailer tracking associated with job execution.

# The iFace

# SmartJobs

# SmartJobs; Key Functionality

- Ability to integrate with Freight2020 for manifest, job & item information
- Options for barcode scanning, demurrage, navigation and proof of delivery (photo and sign-on-glass).
- See the driver and vehicle in action with a tracking view within each run sheet.
- A real-time window of detail into each run sheet and jobs within, including delivery details, PODs, items to deliver and more.
- Job and locational information are collated in real-time giving full report capabilities.

# CMS & Teletrac Navman

A comprehensive total integration of Transport Management System with the added richness of driver compliance focused telematics systems.

Thank You!
