

# Invasive Alien Species (IAS) and NIRAM

Identification of Best Practice, Development of Supporting Material

# Gisela Holzgraefe (MEKUN)

# Nature Protection Expert Team IMPEL Open Day - 19 February 2025

Funded by the European Union

## The context

- The increasing number of invasive alien species (IAS) poses a threat to native biodiversity in the European Countries (and worldwide).
- According to the Invasive Alien Species Regulation (EU) 1143/2014 Member States must establish action plans and implement surveillance systems to enable early detection and rapid eradication.
- In 2021 the Commision published a report about the implementation and enforcement of the Regulation in the Member States.
- Some results: action plans still missing in several MS, knowledge gaps, shortcomings in surveillance systems and official control structures ...

### **IMPEL** activities

- In 2023 and 2024 IMPEL has made the first steps to explore the implementation and enforcement of the Regulation in the member countries.
- Some findings: the Regulation is very complex and addresses many involved parties (authorities, landowners, gardeners, customs, ...)
- Early detection and immediate reaction are crucial points.
- Resources (money and staff) are important.
- Regular inspections are needed for checking the success of measures.
- Result: "Roadmap for Projects on Invasive Alien Species (IAS)".

#### Project series on IAS 2025 – 2027: desired outcome

- Overview on what has already been done in LIFE-/Interreg projects
- Knowledge base development for eradication methods
- Checklist / tool for planning, carrying out and ensure the result of eradication / combating measures
- List of awareness raising methods that have proven results
- Systematic approaches for planning and carrying out inspections with focus on IAS

#### Project series on IAS 2025 – 2027: the activities

- Carrying out joint inspections with focus on IAS combating / eradication methods in the field (incl. use of NIRAM for planning)
- Share best practice on eradication methods learning from finalised projects
- Development of a checklist for preparing, planning, carrying out and assessment of results of eradication activities, on top identification of necessary follow-up measures
- Exchange on early detection notifications and rapid eradication
- Workshop on awareness raising

#### Project series on IAS 2025 – 2027: inspections

- For planning inspections of nature protected sites, IMPEL recommends the use of the NIRAM tool
- NIRAM = Integrated Risk Assessment Method for Nature protected sites. Based on a defined set of criteria the tool can be used for determining the frequency of inspections and establishing annual inspection programmes.
- Presence of IAS is one criterion (among others)
- It has to be explored whether it should get an overriding importance.

# Some examples

Ludwigia Grandiflora – IAS in "A Limia", Galicia

Treatment of Ailanthus altissima – injection of herbicide in National natural reserve "Větrušické rokle"(CZ)

Eradication of IAS in Nature Park Ragakāpa (LV) by using of a small tractor, by uprooting bushes with manual lifters and

IMPEL Open Day 2025 - manpower

#### **Contact information:**

- ✓ For joining this project: If you work for an IMPEL member organisation and would like to join the project or receive further information, please contact the National Coordinator of your country and the Project Manager at Gisela.Holzgraefe@mekun.landsh.de
- For becoming a member of IMPEL: If you are from an Environmental Authority or association of authorities that is based in a member state of the EU, a candidate country or another country applying Community law and would be interested in becoming a member of IMPEL, please contact IMPEL Secretariat at info@impel.eu for more information.
- ✓ For all other interested parties: please check out our new website for further information!
